

The Video Management Software

made in Germany

Single site installations

digivod *VMS*

digivod *VMS* is the flexible solution for all kinds of video surveillance installations. It is unrestricted in terms of camera channels, clients, recorders and features.

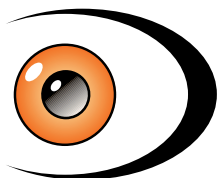

digivod *SMART*

digivod *SMART* includes all features needed for professional video surveillance with up to 10 cameras.

Center software for distributed installations

digivod *Multi-Location*

By combining the *VMS* with the *Multi Location module* you create a powerful center software that can be used to manage all sites and site resources. It adjusts to the various WAN qualities between center and site and allows fluid viewing in even limited network setups.
